CSS Shadow Effects

With CSS you can add shadow to text and to elements.

In these chapters you will learn about the following properties:

- `text-shadow`
- `box-shadow`

CSS Text Shadow

The CSS `text-shadow` property applies shadow to text.

In its simplest use, you only specify the horizontal shadow (2px) and the vertical shadow (2px):

Text shadow effect!

Next, add a color to the shadow:

Text shadow effect!

Then, add a blur effect to the shadow:

Text shadow effect!

```
        }
```

The following example shows a white text with black shadow:

Example

```css
h1 {
    color: white;
    text-shadow: 2px 2px 4px #000000;
}
```

The following example shows a red neon glow shadow:

Text shadow effect!

Example

```css
h1 {
    text-shadow: 0 0 3px #FF0000;
}
```

Multiple Shadows

To add more than one shadow to the text, you can add a comma-separated list of shadows.

The following example shows a red and blue neon glow shadow:

Text shadow effect!

The following example shows a white text with black, blue, and darkblue shadow:

You can also use the text-shadow property to create a plain border around some text (without shadows):

Border around text!

```
h1 {
  color: coral;
  text-shadow: -1px 0 black, 0 1px black, 1px 0 black, 0 -1px black;
}
```
